Cedar Rapids, Iowa

FEBRUARY 1933

THIS is the first issue of a little bulletin which the Collins Radio Company will publish periodically and mail to all of its friends who have requested the Collins general catalogue. The COLLINS SIGNAL will serve principally as a supplement to the general catalogue and will keep it up to date. The format is such that it can be inserted in the binder furnished with the catalogue. In this way it will be possible to describe the equipment a little more fully and discuss in detail certain subjects which prove to be of general interest. However, we also propose to include newsy bits which will acquaint you with the radio activities of many of your friends and our friends. May we suggest that you write to us whenever something unusual or interesting occurs within the sphere of your activity. We will welcome suggestions as to what additional material should be included.

A Recent Collins Installation

The first installation of the 20B was made at W9BHT, the station of Mr. W. P. Ingersoll at Canton, Illinois. Mr. Ingersoll is an old-time amateur. Before installing the 20B, he had built several record making transmitters which had won him a WAC certificate and a host of friends throughout the country. Mr. Ingersoll's desire to have a station which would be the "last word" in appearance and performance led to the creation of the 20B. W9BHT now operates on 3905 kc and 14224 kc and "Bill's" voice has become familiar to amateurs and short wave listeners all over the globe.
