

COLLINS RADIO COMPANY

Designers and Manufacturers of
Transmitters, Transformers and Speech Equipment

CEDAR RAPIDS, IOWA, U.S.A.

January 6, 1936

Mr. Charles B. Conro, Jr.,
Box 371,
Valhalla, New York.

Dear Mr. Conro:

We are in receipt of your card of January 1 requesting information on our transmitters.

As you no doubt know, our line of transmitting equipment is very broad - consisting of amateur and broadcast transmitters of various classes and powers - so that it is rather difficult for us to make definite recommendations.

For your consideration, however, we are inclosing the September issue of the Collins Signal which illustrates and describes the 45A Transmitter, which is the lowest powered transmitter in our line. Quotation sheet covering the net price of this model is also attached.

We have been working for the past year to develop a compact and serviceable transmitter having a power output capable of consistent communication on the 160, 80, 40, 20 and 10 meter bands, and can now offer this unit for installation in amateur stations. The general trend of all radio enthusiasts is toward a set which is completely self-contained. This type of construction permits the installation of the 45A on the operator's table beside his present receiver.

We are placing your name on our mailing list to receive future issues of the Collins Signal, and if you will let us know something further as to your requirements, we will be glad to furnish you with information and price quotations on the equipment we manufacture to meet your needs.

Very truly yours,

Handwritten signature of C. R. Miller.
